Dividend and Interest Information

Dividends and interest are paid from current income and available earnings, after required transfers to reserves at the end of a dividend period. The Dividend Period for our accounts is shown below. For example, the beginning date of the first dividend period of the calendar year for monthly and quarterly dividend periods is January 1, and the ending date is January 31 for monthly periods and March 31 for quarterly periods. "Dividend Period" refers to both dividends and interest. For certificates, the dividend periods may also equal the maturity of the certificate. For example, the beginning date of the first dividend period for certificates is the date of issuance, and the ending date of such period is the maturity date. The dividend or interest declaration date is the ending date of the dividend period, and for the examples above would be January 31, March 31 and the maturity date, respectively. All other dividend periods follow this same pattern of dates. The dividend rate and APY may change every dividend period as determined by the Credit Union's Board of Directors.

Dividends and interest are calculated by the average daily balance method, which applies a periodic rate to the average daily balance in the account for the period. The average daily balance is determined by adding the full balance account each day of the period and dividing that figure by the number of days in the period. Dividends or interest will begin to accrue on the business day you deposit non-cash items (e.g., checks) to your account. If you close an account, you will forfeit all dividends or interest not yet credited. As of 05/14/2025 the dividend and interest rates and the Annual Percentage Yields for our accounts were:
